

**565 and 569 BLOOMINGDALE ROAD COTTAGES**, 565 and 569 Bloomingdale Road,  
Staten Island. Built c. 1887 and 1898

Landmark Site: Borough of Staten Island Tax Map Block 7020, Lot 4

On August 10, 2010, the Landmarks Preservation Commission held a public hearing on the proposed designation as a Landmark of the 565 and 569 Bloomingdale Road Cottages and the proposed designation of the related Landmark Site (Item No. 3). The hearing had been duly advertised in accordance with the provisions of law. There were five speakers in favor of the designation including a member of the Board of Trustees of the Rossville AME Zion Church, the owner of the property. Other speakers on behalf of the designation included representatives of the Sandy Ground Historical Society, the Preservation League of Staten Island, the Society for the Architecture of the City, and the Historic Districts Council. The Commission has received two letters in support of the designation, including one from the Metropolitan Chapter of the Victorian Society in America. There were no speakers or letters in opposition.

Summary

Constructed between 1887 and 1898 as rental properties by Robert E. Mersereau, the small, frame houses at 565 and 569 Bloomingdale Road, traditionally known as the “baymen’s cottages,” are rare surviving buildings from the period when Sandy Ground was a prosperous African-American community on Staten Island. Beginning in the 1840s through the early 20<sup>th</sup> century, this area, called Woodrow, Little Africa,

or (more commonly) Sandy Ground, was home to a group of free black people residing in more than 50 houses. For much of that time, many of them were employed in the oyster trade or in farming. Sandy Ground is located in the southern part of Staten Island, not far from the shipping port of Rossville on the Arthur Kill to the north and the prime oyster grounds of Prince’s Bay on the south. The first African-American residents purchased property in the area by 1830 and their numbers were bolstered by the arrival of numerous families from Snow Hill, Maryland, who settled in Sandy Ground in the 1840s and 1850s. These were free blacks who had been involved in the oyster trade on the Chesapeake Bay and came to New York because Maryland had passed a series of harsh laws in the 1840s and 1850s that made it difficult for them to ply their trade. The Sandy Ground community thrived for many years, built substantial houses and established successful businesses and institutions, chief among them the Rossville AME Zion Church.

Typical examples of the small cottages erected in late 19<sup>th</sup> century and early 20<sup>th</sup> century to house workers in the rural areas of New York, these two houses were nearly identical: two story one-room deep, peaked-roofed frame structures with central chimneys and side hall entrances with shallow stoops and porches. No. 569 Bloomingdale Road, the northernmost of the two houses was occupied from about 1900 to 1930 by William D. Landin, son of Robert Landin, one of the most prominent and successful of the Maryland oystermen who settled in Sandy Ground around 1850. William D. Landin also had an oyster business until about 1920 and later became the first African American man to work at S.S. White Dental Works. His son-in-

law Girard Bevans, who lived here in the 1920s was one of the city's first African American police officers. Subsequent residents included Susan Landin Henry and her daughter, Lois A. H. Mosley, author of *Sandy Ground Memories*. Residents of 565 Bloomingdale Road included Josephine Henry, Susan Harmon, Murphy and Frances Landin Moore and Thelma "Nan" Pedro, descendants of Sandy Ground's early African-American families who played a prominent part in the community.

In 1922, Mersereau's heir Gertrude M. Jacobus, sold the property to George H. Hunter, the owner of a local construction and maintenance business, and his wife Celia, who lived next door at 575 Bloomingdale Road. The Trustees of the A. M. E. Zion Church of Rossville (aka Rossville A. M. E. Zion Church) purchased the property in 1981. Today the houses survive as a tangible and visible link to the rich history of the Sandy Ground community.

## DESCRIPTION AND ANALYSIS

### Development of the Community of Sandy Ground<sup>1</sup>

The Sandy Ground community was founded on a section of high ground near the center of the southern part of Staten Island, halfway between the well-known oyster beds of Prince's Bay on the south and the port of Rossville on the Arthur Kill to the north. This area has been known by various names through the years, such as Woodrow, Harrisville or Little Africa, and its center was at the confluence of what is now Woodrow and Bloomingdale Roads. Since this area is located inland, rather than along the shore, and was still wooded in the mid 1800s, it was not seen as desirable and therefore was not expensive. The name Sandy Ground first appears on records dating to 1779 and refers to the sandy soil of the area, particularly good for growing certain crops such as strawberries and asparagus.<sup>2</sup>

Staten Island was inhabited for thousands of years by Native Americans.<sup>3</sup> Archaeologist Alanson B. Skinner reported finding evidence of a Woodland Period (2700BP-AD 1500) Native American village at the center of what would become Sandy Ground and there are two documented Native American sites on the lot of the AME Zion Church.<sup>4</sup> While most Native Americans left the island by 1700, a few remained and their descendents could be found on Staten Island as late as the early 1900s. At Sandy Ground, several black families claimed Native American descent and Skinner observed that the Native American tradition of grinding corn with wooden mortars and pestles continued at Sandy Ground into the 1890s.

During the colonial period Staten Island was largely settled by Dutch and Huguenot families with a scattering of English and other Europeans.<sup>5</sup> Many settlers brought white indentured servants or black slaves to the island, with slaves making up between 10 to 23 percent of the population. During the first half of the 19<sup>th</sup> century Staten Island's African-American population continued to grow. Some people who were previously slaves of local residents remained in the area after abolition, while other free blacks came because land was available and inexpensive.<sup>6</sup> Land ownership records indicate that blacks and whites lived peaceably in proximity in this rural part of the island.

The first African Americans became landowners in Sandy Ground before 1830. John Jackson, a free African American from New York, bought 2 ½ acres of land in 1828 and in 1835 he and another African American man, Thomas Jackson (relationship unknown), purchased eight acres. Apparently John Jackson operated the ferry *Lewis Columbia* between Rossville and Manhattan, the only direct method of access at this time.<sup>7</sup>

In the 1840s and 50s, these first settlers were joined by several other African American families who came from an area of Maryland on the Chesapeake Bay called Snow Hill. Although Maryland was still a slave state in these years before the Civil War, it also had a large number of free blacks, many of whom were involved in the oyster trade.<sup>8</sup> Their existence proved to be a bad example for those still living in slavery and during the 1830s, the state passed a series of restrictive laws to control and limit the activities of free black people. These new laws forbade free blacks to captain their own oyster boats or to own guns (which limited their ability to procure food for their families). In response, several African American families involved in the oyster trade moved to Staten Island. The waters off Staten Island were also well known for the fine and numerous oysters they produced and the oyster industry was an important source of jobs for many people on Staten Island throughout the 17<sup>th</sup>, 18<sup>th</sup> and 19<sup>th</sup> centuries. As the oyster beds off Staten Island started to become depleted, a constant stream of maritime traffic developed between these two areas, allowing familiarity and an easy movement of people as well as products. Family names of some of these African Americans who came to Sandy Ground from Maryland at this time included Bishop, Henman, Landin, Purnell, Robbins and Stevens, while others, including the Harris and Henry families, came from elsewhere in New York and New Jersey.<sup>9</sup>

The area attracted more and more free residents of color and established its own distinct community in this period before the Civil War, creating at Sandy Ground a very early neighborhood within (what is now) New York City where free African Americans owned their own property.<sup>10</sup> Even before the abolition of slavery in New York in 1827, there had been free blacks in the city, and they tended to live together in small enclaves in different parts of each county, but usually they did not own their own homes.<sup>11</sup> It was generally difficult for newly freed people to earn enough money to purchase land, or to find individuals willing to sell it to them if they could afford it. Only a few other communities of land-holding African Americans have been documented in New York at this time. The first was probably Seneca Village, begun around 1825 when John Whitehead sold off small parcels of his land near what later became Central Park, between 79<sup>th</sup> and 86<sup>th</sup> Streets, and Sixth and Seventh Avenues.<sup>12</sup> By 1855, the census listed 264 people at this location, consisting mostly of blacks but also including some whites (mostly Irish and German immigrants), and at least three churches, a school and a cemetery. Against the wishes of the residents the village was destroyed as part of the construction of Central Park by the end of the decade. Another settlement of free blacks began in the 1830s, but was firmly established in 1838 when James Weeks purchased property from the Lefferts family estate in what was (then) the outskirts of Brooklyn, now Bedford-Stuyvesant. More than 100 people lived in this stable African American community throughout the rest of the 19<sup>th</sup> and early 20<sup>th</sup> centuries.<sup>13</sup>

At Sandy Ground African Americans were also able to own property and start their own institutions, such as churches and schools. The origins of the church at Sandy Ground date to May 1849 when William H. Pitts, a Virginia-born African Methodist Episcopal Zion minister, purchased land on Crabtree Lane west of Bloomingdale Road. He built a house and began holding prayer services in his house and in the home of his neighbor, William Stephens. In December 1850 a group of residents gathered at Pitts' home to found the African Zion Methodist Church in the Village of Rossville, now Rossville AME Zion Church, and elect five Trustees. On December 11, 1852, this group purchased land on Crabtree Avenue for a church. A "plain wooden structure" (no longer extant), seating 150 persons, was erected by 1854. A cemetery was established on land to its west. (The Rossville AME Zion Church cemetery is a

designated New York City Landmark.) Other institutions, such as the local school, run by Esther Purnell, accommodated the children of both black and white residents. Local businesses also began, to supply what the community needed, such as the Bogardus general store and the blacksmith shop of William Bishop (begun 1888).

There have often been rumors that Sandy Ground was used as a stop on the Underground Railroad. This was a logical conclusion, since people from here traveled regularly between New York and southern slave states. Additionally, AME churches were often known for their willingness to help escaping slaves. However, since there are so few remaining structures from the original Sandy Ground community, and no written records documenting any occurrence have surfaced, this cannot be conclusively proven.

### Oysters and Oystering<sup>14</sup>

Oysters have been an important source of food and commerce in New York since before the white explorers arrived. The Lenapes were harvesting and eating oysters when Hudson arrived (shown by the huge piles of oyster shells or middens they left)<sup>15</sup> and the mollusks helped sustain the early settlers. Oysters were already well-known in Europe, having been popular since the Roman empire. The Dutch, French and British were great lovers of oysters when they arrived in the New World and this food figured prominently in European (and hence American) cuisine of the 17<sup>th</sup> and 18<sup>th</sup> centuries, with recipes for oysters included in most cookbooks of that time.<sup>16</sup>

Oysters grow best in “warm, brackish water in intertidal and sub-tidal areas along shorelines.”<sup>17</sup> Oysters are quite adaptable and can survive cold winters by hibernating and can also live in water up to 90 degrees Fahrenheit. They are found all along the Atlantic coast, although they grow faster and bigger in warmer water.

In Europe the traditional method of gathering oysters was to wade into the water at low tide with rakes, picking them up by hand. The Lenape showed the settlers how to row out into deeper water and use long-handled rakes with two sets of teeth, called tongs, to grab the oysters and fill their boats. This faster and more efficient gathering process was important since New Yorkers would eat as many oysters as were available. They were popular with all classes of people and large numbers of oysters were served at fancy banquets as well as in the poorest slums of the cities. New York’s first oyster cellar opened in a basement of a building on Broad Street in 1763.<sup>18</sup>

Since oysters lay their eggs in spring, oyster harvesting was initially restricted to the fall or winter months, or months with the letter “R” in them. A law to this effect, implemented by the colonial government by 1715, was an early attempt at conservation.<sup>19</sup> New Yorkers, however, were not content to restrict their oyster consumption and before long, they learned to pickle oysters to make them available throughout the year. In 1807, under pressure from local businessmen, New York stopped limiting the gathering of oysters to the colder months and in 1819, in order to be able to eat oysters any time and place, the first oyster cannery opened. The advent of steamships and then the opening of the Erie Canal allowed access to more markets, with purveyors demanding more and more oysters. In response, fishermen harvested more and more of the animals.

The oyster beds around New York had begun to show signs of depletion as early as the mid 18<sup>th</sup> century, both from overfishing and from pollution. New York City’s trash and waste were washed into nearby rivers and streams, befouling waterways, groundwater, wells and beaches. By around 1750, malaria from mosquitoes and cholera from tainted water had become commonplace. Since oysters feed on the organic matter in the water in which they live, they and

other creatures that depended on this habitat began to suffer. In the 19<sup>th</sup> century, with the progress of industrialization, local rivers and bays were also used for dumping industrial waste, a situation that worsened the condition of local oysters.

The system of “planting” young oysters had been practiced in several parts of the world for many years. It had become common in Europe which had already experienced a drop in production of their oyster beds. Even though fishermen did not understand much about oyster reproduction, they had known for some time that oysters could be grown more successfully in habitat that was different from where they were spawned. There were still plenty of oysters to be gathered in the Chesapeake Bay off Maryland and Virginia, and New York fishermen realized that tiny oysters from these areas could be brought to the barren beds off Staten Island and Long Island that were known for their excellent oyster-growing conditions. Oysters that began life in the warmer waters of the Bay seemed to mature at a faster rate and once fishermen provided appropriate material for the oysters to attach themselves, they would reach an acceptable size for harvesting in one year.

Such tiny oysters were first brought for planting from the Chesapeake Bay in 1820. A schooner with a captain and four-man crew could travel from Prince’s Bay in Staten Island to the lower Chesapeake, load 2,500 to 3,500 bushels of seed oysters onto their boat and return in less than six days. Upon his return to Staten Island the captain would hire an additional 12 men to shovel the seed oysters overboard onto a specified area that was leased from the state for this purpose. Staten Island oystermen soon developed special wooden trays or “flats” for the oysters to adhere to while other locals developed the skill of making the wood splint baskets that became the standard unit of measure for the oyster trade. In this way, the oyster trade employed many people and by the 1830s was the most important economic activity on Staten Island.<sup>20</sup>

### Sandy Ground Oystermen

While some African-American residents farmed their own land and others traveled to Manhattan to work for whites, many in Sandy Ground earned their living from the oyster industry. Working on board oyster boats and collecting and transporting oysters provided an unusually fruitful method of making a living for blacks in these early days. Even before the end of slavery, it was not unusual for African Americans (both slaves and free) to work aboard ocean-going ships, where there seemed to be harmony with white seamen who apparently were willing to work with multiracial shipmates.<sup>21</sup> Since oystering did not become a major commercial industry with an established hierarchy until the 19<sup>th</sup> century, African Americans were able to become involved and gain a place in this developing field.<sup>22</sup> It required very little capital investment, yet returned a decent living, allowing the free blacks in the Chesapeake Bay area, as well as those on Staten Island, to create comfortable lives for themselves. In the 19<sup>th</sup> century the oyster industry was such an important part of the economy of Staten Island that some of those who pursued it became wealthy, while others were able to support their families in a comfortable manner for many years. Work was available at many levels of the operation: on the boats, planting the seed oysters, collecting them, opening and packing them for shipping as well as selling them. Several residents of Sandy Ground were able to purchase their own boats for dredging oysters, while others worked aboard the boats of others. This activity, as well as oyster shucking and processing employed many Sandy Grounders for a long time. The 1880s and 90s were the “Golden Age” of Sandy Ground’s African American community and the area had as many as 50 homes.

Indications of severe pollution in the waters off Staten Island began in the early years of the 20<sup>th</sup> century. The oyster beds were officially closed in 1916, after several outbreaks of typhoid due to eating polluted oysters. The community of Sandy Ground, so dependent on this industry, gradually declined. Some residents were able to find work in local factories or commuted to Manhattan or New Jersey for jobs. Others relied on small farms to feed their families and supply markets in Manhattan. Eventually however, this stable community of free and prosperous African American families declined. Severe fires in 1930 and in 1963 destroyed many houses and much property, although a recognizable community continues to exist in Sandy Ground today. It consists of descendants of people who have lived in the area for more than 100 years.

### The Houses at 565 and 569 Bloomingdale Road<sup>23</sup>

In the mid-1870s farmer and village letter carrier Thomas B. DuBois owned a house and 11-acre farm on the east side of Bloomingdale Road about 400 feet south of Woodrow Road. By the late 1870s Du Bois subdivided his land into long narrow lots. This lot, which has a frontage of 104 feet on Bloomingdale Road and originally extended back more than 500 feet from the street, was purchased by Robert E. Mersereau. Based on historic maps it appears that sometime between 1887 and 1898 Mersereau erected two small two-story houses, now 565 and 569 Bloomingdale Road. A third house, which sat well back from the road and was usually known as 569 Rear Bloomingdale Road, was constructed between 1907 and 1913. Built as rental units, these modest houses have traditionally been known as “the baymen’s cottages.” In 1922, Mersereau’s heir and executrix Gertrude M. Jacobus sold this property with its three houses to George and Celia Hunter, who lived next door at 575 Bloomingdale Road. George H. Hunter (1869-1966), the protagonist in Joseph Mitchell’s *New Yorker* article “Mr. Hunter’s Grave,” was a major figure in the community. He served as chairman of the Board of Trustees for the AME Zion Church for over 30 years, was for many years the chief organizer of the church’s fund-raising barbecues, and was one of the chief caretakers of the AME Zion Church cemetery. Originally a cook on a fishing schooner, he ran a scavenging/salvage business in the 1910s and in the 1907. He retained ownership of this property until 1945 when he sold it to William and Ruth Diamond of Hillsdale, New Jersey. The Diamonds in turn sold the property to I.D. Drew, Inc., of Newark in 1946. Hunter continued to act as the owner’s representative for the houses under the new owners. In 1981 the Rossville AME Zion Church acquired the property. In 1984, the church conveyed the rear portion of the lot to a developer in exchange for a lot at the southwest corner of Bloomingdale Road and Clay Pit Road. Subsequently, No. 569 Rear was demolished and the rear portion of the lot redeveloped. Through the years many of the residents of 565 and 569 Bloomingdale Road have been descendants of many of Sandy Ground’s historic families, providing a tangible link to the history of this remarkable enclave.

### **No. 569**

The 1900 census indicates that 569 Bloomingdale Road was occupied by oysterman William Dawson Landin (1867-1947), his wife Ella Bishop Landin, and their daughter Beatrice. Ella [Frances] Bishop Landin (1877-1908) was the daughter of Susan Lake Bishop and Eben Bishop, a Maryland-born oysterman. William D. Landin was the son of Robert Landin (1830-1910) and Sarah Jane [Jackson] Landin, one of the founders of Rossville AME Zion Church. Robert Landin and his brother Dawson were among the most famous and successful of the oystermen from Snow Hill, Maryland, who settled in Sandy Ground. By 1875 both Dawson and

Robert had become oyster growers (planters) and sloop owners (Robert of the *Independence*), who might hire “as many as ten men to work moving seed oysters from the Arthur Kill into Prince’s Bay and recovering the mature stock.”<sup>24</sup> William D. Landin probably began his career working on his father’s boat and later had his own business. He remained in the oyster trade until at least 1920, perhaps fishing the waters off Long Island, as some Sandy Ground oystermen did following the closure of the oyster grounds in New York Harbor.<sup>25</sup> By 1930, however, he had to given up his business. He then became “the first black man to work at the S.S. White Dental Manufacturing Co. in Prince’s Bay.”<sup>26</sup> It is indicative of the racial prejudice faced by African Americans during the 1930s that despite having run his own business William D. Landin was employed as a porter at the dental works.

In April 1911, three years after the death Ella Bishop Landin, William D. Landin married Mabel Gardner of Manhattan at the parsonage of the Rossville AME Zion Church. They had a son, Gordon, in 1915. By 1920, Landin’s daughter Beatrice and son-in-law Girard Bevans and their infant son, Haywood, were living with the Landins at No. 569. Girard was then employed as a laborer at a nearby fertilizer plant. By 1923 he had become a police officer, one of two who lived in the village of Sandy Ground (the other was Japheth A. Henman of 704 Bloomingdale Road). In 1929, there were only 90 African American police officers in the entire city of New York out a total of 18,000, so that Girard Bevans, who was stationed in Harlem for much of his career, received considerable coverage in the *New York Amsterdam News*, including a photograph in January 1930, when he was promoted to patrolman, first grade.<sup>27</sup>

In 1930 the Bevans had a new house constructed at 591 Bloomingdale Road where they moved with the Landins. After the Bevans and Landins moved to their new house, 569 Bloomingdale Road was leased to Geraldine C. and Hugh E. McDonald. Geraldine C. McDonald was the daughter of Alice and Walter L Henman and a descendant of Maryland families that had settled in Sandy Ground in the mid-19<sup>th</sup> century. Her husband Hugh E. McDonald was from Jamaica, West Indies, and was a factory worker. They had four children – Walter (Buddy), Edna, Gloria and Hugh Enrick (Enny Mac). In her reminiscences of growing up in Sandy Ground, Lois Mosley, who lived at No. 569 rear records that after running water on the same meter was installed in the three houses, the McDonalds at No. 569, the Moores at No. 565, and the Henrys at No. 569 Rear devised a “telephone system” – turning the faucet on and off sharply so that it knocked a certain number of times – the number of knocks alerting a particular neighbor to “stick their head out the door for a message.”<sup>28</sup>

The McDonalds resided at No. 569 house until sometime in the 1940s. Lois Mosley’s mother, Susan Landin Henry (1905-1948), and her children then moved to the house. Her son Howard Kenneth Henry was listed in the phone book as still living there in 1952. In 1953 Lois Henry Mosley and her husband Glenby Mosley, “a Sandy Ground boy” who had served in the army and played for the Black Yankees in the last years of the Negro League before taking a job with the New York City Department of Sanitation, moved to the house where they resided until 1957.<sup>29</sup> In 1958, after the Mosleys left for larger quarters in Mariner’s Harbor, Jennie C. Turner moved to No. 569 where she resided until her death in 1994.<sup>30</sup> Currently the house is occupied Kenneth Cooper, grandson of Rev. Louis Roach, a minister at the Rossville AME Zion Church, and son of Sadie Roach Cooper, who kept a grocery store at 559 Bloomingdale Road, and John Cooper, a construction worker from Virginia.

## No. 565

The earliest record for No. 565 is the census of 1910, which lists Eureka Lee, a 70 year-old African-American woman, born in New York State to parents from Delaware, as the lessee for this house. She shared it with boarder Josephine Henry, the daughter of oysterman John Jackson Henry and grandniece of Sandy Ground founder Captain John Jackson and Elizabeth Cornelius Henry. By 1915, No. 565 was being leased to Susan Harmon, the widow of oysterman Fred Harmon. Susan Harmon resided at No. 565 until at least 1920; during that time census records indicate she earned her living as a domestic servant and laundress.

By 1925 Frances and Murphy Moore had moved to No. 565. Frances Landin Moore (1901-?) was the daughter of oysterman Dawson Landin, Jr., and Georgianna Harris Landin, sister of Susan Landin Henry (of No. 569 Rear) and aunt of Lois A. H. Mosley, who knew her as "Aunt Frank." She played piano and organ for the Rossville AME Zion Church. Murphy Moore (1889-?) was from Woodstock, Virginia, and was employed as a stock clerk in the 1920s and a laborer in the 1930s. The Moores had four children: Leonora, Lindwood, Beatrice, and Calvin. Lois Mosley recalled that she, "her brother and sisters, and Aunt Frank and Uncle Murphy's children were raised as one family."<sup>31</sup>

Uncle Murphy was quite a farmer. We children considered it great fun to help him spade the entire backyard and rake it up for planting. We would level the soil and plant the seeds for various vegetables. Murphy Moore loved to trap. The neighborhood boys used to help him empty the traps that he set down in the woods behind 569. He would catch and skin rabbits and possum. Occasionally he would catch a snapping turtle.<sup>32</sup>

The Moores remained at 565 Bloomingdale until at least 1942 and probably into the 1950s. In the late 1960s and early 1970s the house was occupied by the family of Richard Butler. In the early 1990s it was the home of Thelma "Nan" Pedro, the seventh child of Susan Jane Bishop Pedro and William (Pop) Pedro. Pop Pedro lived to 106, was an authority on the history of Sandy Ground, and was proclaimed the "Honorary Mayor of Sandy Ground" by Borough President Ralph Lamberti in 1979. Nan Pedro made her living by providing day care for neighborhood children. She was active in the Rossville AME Zion Church, where she served as president of the Missionary Society for 19 years, taught Sunday school, served on the Ushers Board, Pastor's Aid Society, and sang in the choir. After the South Shore fire of 1963, she assisted the Red Cross in establishing a distribution center in the basement of the church to assist fire victims. She moved to Jacksonville, Florida in 1995. Presently the house is occupied by John Turner, son of Jennie Turner, who used to reside at 569 Bloomingdale Road.

## No 565 and 569 Bloomingdale Road as Workers' Housing<sup>33</sup>

Nos. 565 and 569 Bloomingdale Road are typical examples of the small cottages erected in late 19<sup>th</sup> century and early 20<sup>th</sup> century to house workers in the rural communities of New York and New Jersey. Typically such houses were small, sound, minimally-ornamented, two-story, frame dwellings of four to six rooms. Constructed as economically as possible, such housing usually lacked the amenities of indoor plumbing and running water. Originally nearly identical, 565 and 569 Bloomingdale Road are two stories tall, have side halls and two-rooms on each floor, central chimneys, and gabled roofs. Both were faced with clapboards, had paneled wood-and-glass doors, and six-over-six wood window sashes. Both originally had simple shed-roofed porches and stoops in the north bay of their facades. No. 569 Bloomingdale Road was built with an entrance and porch on the south side of the house. Based on an analysis of the

Topographic map of 1913, 565 Bloomingdale Road probably had a rear entrance and porch. By 1940 that porch had been replaced by a shed-roofed rear addition. Now the more altered of the two houses, 565 Bloomingdale Road has an enclosed gable-fronted entrance porch and a gabled rear addition; 569 Bloomingdale Road has three rear additions. Both have been reclad and have replacement doors and windows, but for the most part retain their original form and fenestration pattern. Both have been upgraded to include indoor plumbing and bathrooms, although both houses retain historic well heads in their yards.

Most of the housing in New York City built specifically for workers took the form of tenement houses and rowhouses. Although free-standing houses were common in the less urbanized portions of the city, houses built for workers in a particular industry were far less common. Moreover these houses have frequently been lost to redevelopment due to their modest size and the fact that they were by-and-large built for industries and companies that no longer exist. On Staten Island there appear to be only a few surviving examples of such buildings, notably the Kreischerville Workers' Houses, in Charleston, (71-73 Kreischer Street, built 1890, designated New York City Landmark). Thus the Sandy Ground Baymen's Cottages survive today as rare examples of late 19<sup>th</sup> century workers housing on Staten Island as well as significant reminders of the Sandy Ground Community.

### Description

#### **569 Bloomingdale Road**

*Historic:* Two-story, three-bay front facade; main entrance in northern bay; possibly original door; side gable roof; brick chimney centered on ridgeline; secondary entrance on southern facade; masonry foundation, slightly raised; original fenestration pattern.

*Alterations:* Asbestos siding (originally clapboard); concrete stoop with 2 steps by main entrance; aluminum awning over door; wooden stair by side entrance; paneled side entrance door; storm doors on both entrances; all windows double-hung vinyl sash (originally double-hung, multi-pane, wood sash); rear addition with various sections, shallow shed and gable roofs, mostly covered with asbestos siding; small section in rear faced with aluminum siding and historic wood, paneled door; tar paper on rear roofs; asphalt shingles on main roof

*Site:* House faces Bloomingdale Road; historic capped well near sidewalk in front; dirt driveway on southern side of lot; asphalt sidewalk; mature trees; wire fencing around lot.

#### **565 Bloomingdale Road**

*Historic:* Two-story, three-bay front facade; main entrance in northern bay; side gable roof; brick chimney centered on ridgeline; masonry foundation, slightly raised; original fenestration pattern; some 2<sup>nd</sup> story windows have 6/1 double-hung wood sash; many 1<sup>st</sup> story windows have wood sash, of various configurations.

*Alterations:* House faced with asbestos siding (originally clapboard); enclosed, gabled front porch in front of main entrance; rear extension with shallow rear-facing gable roof, contains rear entrance, wood-sash window, enclosed porch; pent roof porch overhang supported on posts; plastic covering over window openings of 2<sup>nd</sup> floor rear; tar paper roofing on main house and extension; patched walls; through wall air-conditioner on northern facade; pump on concrete base attached to southern side of house.

*Site:* House faces Bloomingdale Road; historic capped well behind house; mature trees, brick and dirt driveway on north side of lot; 2 small outbuildings in rear of yard; brick barbecue pit in rear yard, split rail fence; driveway and small garage in side yard to north of house.

This site is within the National Register Sandy Ground Archaeological District, designated to recognize the free black community founded in the mid 19th century; designation included archaeological resources as they could illuminate the evolution of the community; therefore the site has the potential to contain significant archaeological resources related to Sandy Ground and to Native American occupation.<sup>34</sup>

<sup>34</sup> Sandy Ground Historic Archaeological District (AO85-01-2258-DO3) National Register of Historic Places Inventory-Nomination Form for the United States Dept. of the Interior, National Park Service, prepared by the New York State Office of Parks and Recreation and Historic Preservation on August 1, 1982.

## FINDINGS AND DESIGNATION

On the basis of a careful consideration of the history, the architecture, and other features of the building and site, the Landmarks Preservation Commission finds that the 565 and 569 Bloomingdale Road Cottages have a special character, special historical and aesthetic interest, and value as part of the development, heritage, and cultural characteristics of New York City.

The Commission further finds that, among their important qualities, the 565 and 569 Bloomingdale Road Cottages, constructed between 1887 and 1898 as rental properties by Robert E. Mersereau and traditionally known as the “baymen’s cottages” are rare surviving buildings from the period when Sandy Ground was a prosperous African-American community on Staten Island; that the rural community of Sandy Ground, located in southern Staten Island, was started in the mid 1840s by free African Americans, many of whom came from Maryland and were employed in the oyster industry; that activities related to oysters provided Staten Island’s largest sources of employment during the 19<sup>th</sup> century; that these houses are two-story one-room deep, peak-roofed structures with central chimneys and side hall entrances with shallow stoops and porches; that they are typical examples of the small cottages erected in the late 19<sup>th</sup> and early 20<sup>th</sup> century to house workers in the rural areas of New York; that 569 Bloomingdale Road was occupied from about 1900 to 1930 by William D. Landin, son of Robert Landin, one of the most prominent and successful of the Maryland oystermen who settled in Sandy Ground around 1850; that William D. Landin also had an oyster business until about 1920 and later became the first African American man to work at S.S. White Dental Works; that his son-in-law Girard Bevans, who lived here in the 1920s was one of New York City’s first African American police officers; that subsequent residents included Susan Landin Henry and her daughter, Lois A. H. Mosley, author of *Sandy Ground Memories*; that residents of 565 Bloomingdale Road included Josephine Henry, Susan Harmon, Murphy and Frances Landin Moore and Thelma “Nan” Pedro, descendants of Sandy Ground’s early African-American families who played a prominent part in the community; that in 1922, Mersereau’s heir Gertrude M. Jacobus, sold the property to George H. Hunter, the owner of a local construction and maintenance business, and his wife Celia, who lived next door at 575 Bloomingdale Road; that the Trustees of the A. M. E. Zion Church of Rossville (aka Rossville A. M. E. Zion Church) purchased the property in 1981; that today the houses survive as a tangible and visible link to the rich history of the Sandy Ground community

Accordingly, pursuant to the provisions of Chapter 74, Section 3020 of the Charter of the City of New York and Chapter 3 of Title 25 of the Administrative Code of the City of New York, the Landmarks Preservation Commission designates as a Landmark the 565 and 569 Bloomingdale Road Cottages, 565 and 569 Bloomingdale Road, Staten Island, and designates Borough of Staten Island Tax Map Block 7020, Lot 4, as their Landmark Site
